

# vision at St Nick's

We learn through observing the world around us.

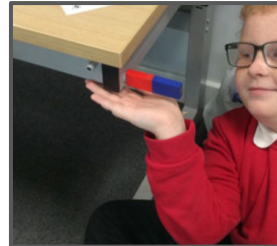

Science lessons challenge and inspire us!

We ask questions, investigate and discover how the world works?

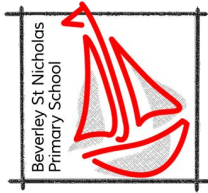

We use practical investigations to help us understand.

Our science lessons are all about exploring!

# principles at St Nick's

Here at St Nicks we believe in these principles:

- building on what pupils already know and inspiring them by asking high quality questions to further their curiosity
- all children having access to active, well resourced, pupil centred learning opportunities which will engage and encourage future aspirations
- success for every child and that learning is meaningful to all
- the development of independent learning and effective, high quality feedback.
